

ALUMINIUM ALLROUND

Genuine Layher product manufactured in Germany

Aluminium Allround Scaffolding

Layher aluminium Allround can be used to particular advantage where weight is an issue including:

- ▶ rolling towers
- ▶ suspended scaffolding
- ▶ scenery in theatres
- ▶ trade fairs and events
- ▶ situations where the support base is at risk of damage eg: historic natural masonry requires refurbishing, but is crumbling under the effects of the environment and hence is unable to bear the weight of steel scaffolding.

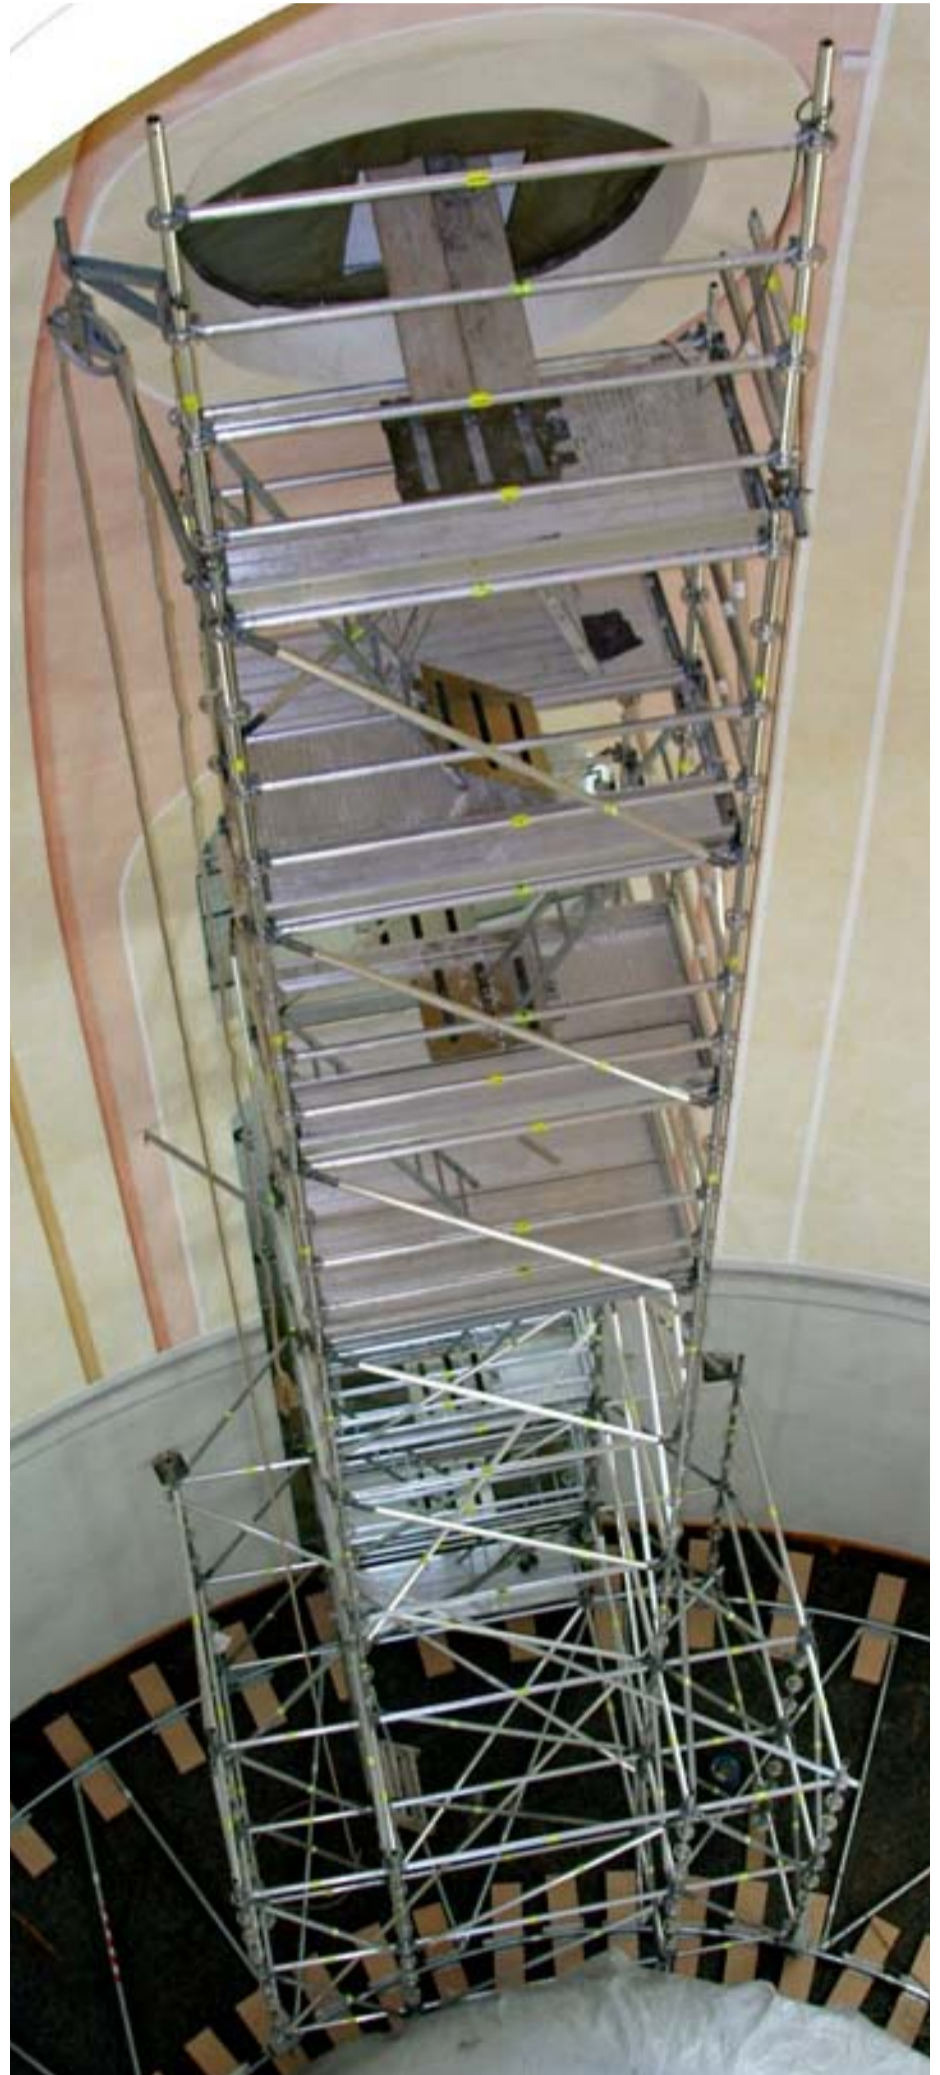

Your advantages:

- ▶ faster assembly
- ▶ low loading weight
- ▶ less physical strain on the scaffolders

Layher Allround in aluminium can be used in conjunction with Layher Allround in steel, as both systems are compatible.

This historic church needing maintenance could not take a live load of more than 2kN/m² on its wooden floor, but needed a platform height of 16.5m.
