

HOT-DIP GALVANIZED

Layher production facilities continue to expand - New hot-dip galvanizing facility up and running

As part of Layher's investment in expanded state-of-the-art production facilities in Germany, a new, fully automated, hot-dip galvanizing facility has now been put into operation. This process protects the steel from corrosion by atmospheric exposure and air pollutants, thereby greatly prolonging its service life and durability. In the second galvanization plant an additional 80,000 tons of steel products can now be hot-dip-galvanized per year and protected for a long time against environmental effects before they leave the factory on their way to customers across the globe.
