

PRESS RELEASE

Layher specified for Pluto Gas Field

Layher, the German manufactured scaffolding system, has been specified by Woodside for the construction of the onshore facilities for the new Pluto liquefied natural gas (LNG) Project near Karratha, Australia.

Construction is starting immediately and Layher is supplying scaffolding through its local subsidiary Layher Pty Ltd, as well as technical advice and engineering support and training, for the Pluto LNG Project. The use of Layher scaffolding systems is expected to provide significant efficiencies for the contractors.

Layher is Europe's leading producer of system scaffolding and is used internationally on major industrial projects in the oil and gas and mining industries, as well as the construction and event industries.

Layher Group Managing Director, Georg Layher, grandson of the founder of the company, who is visiting the area in May, said, "the Pluto project firmly establishes Layher scaffolding systems as the preferred choice in the Australian oil and gas industry."
